DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

New claims 16-21 are amended as provided below to simply remove the underlining as provided by the applicant in the preliminary amendment filed 7/10/2006. The claims remain the same, however, the underlining is removed to put the claims in the proper format for allowance.

16. (New) The method of claim 2, which further comprises the steps of: the roaming equipment taking initiative to report to the current register server when it is off-line, or the current soft switch control device detecting whether the roaming equipment is off line; and the register server setting the roaming equipment in off-line state after receiving the off-line notification from the roaming equipment or the soft switch control device.

17. (New) The method of claim 2, wherein in said step (a), the register server allocates an IP address for the roaming equipment after the roaming equipment connecting the register server.

Art Unit: 2617

18. (New) The method of claim 2, wherein in said step (a), the roaming equipment locates the register server of home domain through a DHCP server location mechanism of DHCP protocol, or the roaming equipment looks up the register server through a way of presetting address.

19. (New) The method of claim 2, wherein in the step (a), the subscriber identification refers to the telephone number or the uniform resource indicator that can locate the subscriber uniquely; the reported information is carried and reported by the roaming equipment automatically, or is input by the roaming subscriber exchanging with the register server through the roaming equipment.

20. (New) The method of claim 2, wherein in the step (a), said roaming equipment also reports signaling protocol it supports; and in said step (c) and (g), the register server further needs to judge whether it supports signaling form of the roaming equipment or not, if not, it refuses the registration.

21. (New) The method of claim 2, wherein in the step (k), the soft switch control device of roaming region sends charge information of the roaming subscriber to the soft switch control device of home region after finishing the service.

Allowable Subject Matter

2. Claims 1-21 are allowed over the prior art of record.

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach a method and system for realizing subscriber's roaming service by a route server, employed in a next generation network architecture which realizes cross-domain call route through the route server, comprising steps (a) through (k), i.e. a subscriber equipment accessing to a network, sending a register request, and reporting subscriber information and authentication information after finding a local register server, the local register server judging whether the subscriber is contracted subscriber of home domain or not, if yes performing step (c), otherwise performing step (g), further reciting the steps to be performed based on the judgment step as substantially described in independent claim 1. The combination of steps (a) through (k) as claimed have not been found to be taught nor suggested by the prior art of record. Claims 2-21 depend from claim 1 and are therefore allowed for the same reasons.

Specifically, Keeler et al. (US 2007/0220596), which is considered the closest prior art found, teaches a method and system for authorization and authentication of user access to a network communication system with a roaming feature. Keeler teaches a subscriber equipment accessing to a network (figure 8 item 302-304), sending a register request (figure 8 item 304), and reporting subscriber information and authentication information after finding a local register server (figure 8 item 308), the

Art Unit: 2617

local register server judging whether the subscriber is contracted subscriber of home domain or not (figure 8 item 310-312). Keller can further be understood to teach the next step, i.e. step (c), in that he teaches the local register server judging whether the authentication information is right or not (figure 8 item 312), and if not refusing registration (figure 8 item 314).

However, Keeler does not teach the specifics steps that are recited after this judging in step (b), that recites otherwise performing step (g), and its subsequent steps, i.e. (h)-(k). He also does not teach the limitations in step (c), when the authentication information is correct (i.e. step (c) otherwise...), and then performing the subsequent steps that follow (i.e. (d)-(f).

The examiner would like to note that the steps as claimed in independent claim 1 have been carefully considered and the examiner has consulted primary examiners regarding their interpretation. The claims have been understood to be of the non alternative language type. Therefore the examiner must consider all limitations in the claims and the prior art must also show all limitations in order for the claims to have been rejected. (i.e. step (b) recites performing a judgment step and if the answer to the judgment is yes performing step (c) otherwise performing step (g), the examiner notes that each link from the judgment step must be shown since the claims are not alternative. That is to say the claims cannot be read as if they say "performing one of", since based on the judgment, one of the steps will then be performed. Further, the

Art Unit: 2617

claims recite both responses to the judgment step (i.e. "if yes" and "otherwise") and therefore they positively recite the steps for each response to the determination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL T. THIER whose telephone number is (571)272-2832. The examiner can normally be reached on Monday thru Friday 7:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Edouard can be reached on (571) 272-7603. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
